About Us:

Devoted to serving the medial device industry.
Founded in 1970, Disposable Instrument Company is entirely devoted to serving only the medical device industry. We focus on the needs of medical device companies like yours and understand the regulations and practices of the industry.

Reliability. The first requirement of any medical device.
Our raw material is analyzed by an outside laboratory and certified to ASTM F-899 and ISO 7153-1 for stainless steel used in surgical instruments, or ASTM F-138 and ISO 5832-1 for implants. Your components are traceable by part number, heat number, job number or lot number; and the records are kept for not less than seven years. Part dimensions are controlled by statistical analysis and each and every part is visually inspected for burrs, cracks, pits, finish and workmanship. What you order is what you get.

Customers are the only reason we exist.
Changes in your daily business are inevitable and we respond promptly. Your parts are kept in stock for multiple release orders to meet changes in your schedule, and we'll work overtime to fill your urgent orders. Your phone calls, faxes or e-mail messages are answered promptly. Our mission is to serve our customers so well that they become loyal customers because of the service we provide.

25,000,000 metal medical components
We have produced over 25 million metal medical components. Our broad knowledge of which metal alloys are suitable for various application and design features can help you get the most functional component at the optimum cost. Contact us for suggestions.
