Elekta to Feature Certified MOSAIQ EHR at Electronic Health Records Lab During the 2011 ASCO Annual Meeting

Bio-Medicine.Org

ATLANTA and CHICAGO, May 24, 2011 /PRNewswire/ -- For the fifth straight year, Elekta has been selected to demonstrate at the American Society of Clinical Oncology (ASCO) Electronic Health Records (EHR) Lab, June 4-6, at McCormick Place in Chicago. In the spotlight will be Elekta's MOSAIQ® Oncology Information System, the first and only oncology-specific comprehensive EMR certified for Meaningful Use under the federal government's HITECH Act. MOSAIQ is fully prepared for centers planning attestation in 2011 or 2012.

Elekta is among 12 providers chosen to present at the EHR Lab [1], a forum for ASCO members to discover the latest EHR technology. With nearly 30,000 members, ASCO is the world's leading professional organization representing physicians who care for people with cancer.

Elekta's integrated Oncology Information Systems features a complete, patient-centric chart optimized for medical oncology, radiation oncology and comprehensive practices. During the Lab, Elekta clinical experts will be available to provide hands-on demonstrations of MOSAIQ, and show how this unique, single-database EHR can perform clinical decision support, chemotherapy ordering and Quality Oncology Practice Initiative (QOPI®) case selection.

"Elekta has repeatedly demonstrated and followed through on its commitment to deliver a comprehensive and robust oncology-specific EHR and to support emerging healthcare trends," says Grant Spencer, Vice President, Product Creation, Oncology Information Systems. "For example, Elekta was a leader in support of government initiatives by offering the first comprehensive EHR to receive complete ONC-ATCB certification, and we were ready to implement ICD-10 diagnosis codes years ahead of the deadlines. Elekta is committed to the delegates of ASCO, our customers and clinical partners by providing efficient, streamlined workflows that allow them to focus on patient care."
