In 2010, the Russian dental imaging market exceeded RUB 3.2 billion. Despite the advantages of digital imaging technologies, analog film procedures remain dominant in Russia. Digital imaging is gaining popularity and is expected to capture significant market share over the forecast period.

The dental imaging market includes both intraoral and extraoral devices that assist in the operation of dental practices, as well as emerging technologies that can benefit the long-term profitability of dental offices.

Dental imaging is segmented into:

- Intraoral X-ray market:

- Which includes photostimulable phosphorus (PSP) systems and digital sensors

- The extraoral X-ray market:

- Which includes panoramic and panoramic/cephalometric X-ray systems;

- And cone beam computed tomography (CBCT) scanners

This report provides a comprehensive and detailed analysis of market revenues by device type, market forecasts through 2017, unit sales, average selling prices, market drivers and
