Elsevier launches Malaria Nexus, global malaria resource

EurekAlert

Oxford, 11 August, 2010 Elsevier, the world-leading publisher of scientific, technical and medical information products and services, today announced the launch of Malaria Nexus, Elsevier's Global Malaria Resource, www.malarianexus.com [1].

Malaria Nexus highlights the latest published research in Malaria, utilizing Elsevier's leading journals in Parasitology, Entomology and Tropical Medicine, including *The Lancet®*, The *Lancet Infectious Diseases*, *Transactions of the Royal Society of Tropical Medicine and Hygiene*, and *International Journal for Parasitology*.

"The aim of Malaria Nexus is to be a comprehensive resource and hub of knowledge for malaria researchers worldwide" said Dale Seaton, Executive Publisher for Parasitology, at Elsevier. "As well as making our latest malaria publications free to download, we want to go beyond the article, and become a leading forum for discussion between researchers, editors and opinion leaders."

The site features interviews with key authors, who can expand on their highlighted published work, as well as editors of some of Elsevier's most prestigious journal titles. Active participation and feedback from interested parties is encouraged. Currently featuring article feeds from 13 journals, the site will include additional relevant journals over the coming months.

John Beier, Editor of the participating journal *Acta Tropica*, said, "From remote settings in malaria endemic areas to sophisticated laboratories, malaria researchers from around the world will certainly benefit from using Malaria Nexus by reading timely highlights of first class publications, learning the views of leading malaria experts, and expressing their important opinions in this new forum for exchange of information."
