# PharMEDium's Technology Helps Hospital Pharmacists Ensure Safety

Bio-Medicine.Org

LAKE FOREST, Ill., Aug. 30, 2011 /PRNewswire/ -- David N. Jonas, CEO, **PharMEDium Services**, announces the commitment to continue corporate R&D investments for innovations with an unprecedented focus on **patient safety, quality** and efficiency, providing hospital pharmacists with a steady stream of technologically-driven service advancements. Working in collaboration with hospital pharmacists to enhance **patient safety** and **quality**, **PharMEDium** is offering solutions to challenges associated with supply chain just-in-time services, shortages of key drugs and technology. **PharMEDium** has completed and implemented comprehensive process improvements across all locations resulting in more efficient service delivery while improving **patient safety**. **PharMEDium** conducts rigorous routine monitoring of its processes, facilities, personnel and admixtures.

David Jonas commented, "We have reached another milestone in continuous innovations that enhance **quality, patient safety**, and each customer's experience. Our new technological innovations in drug compounding, distribution, and dispensing are integral to ensuring our hospital customers can continue to improve **patient care** and efficiency."

"Completing systems integration facilitates **PharMEDium's** ability to apply LEAN principles to our process to improve speed to market while maintaining the level of **quality** our customers have come to expect from us," stated Tom Cosentino, Vice President of Field Operations and Supply Chain. "Our automated process verification system is designed to ensure accuracy from sterile FDA approved components through all critical steps in the compounding process including labeling, packaging and shipping to the right hospital and ultimately to the right patient."

**PharMEDium** is the national leading provider of pharmacy sterile intravenous admixture compounding s
