This report studies the global Peripheral Vascular & Interventional Cardiology Devices Market over the forecast period (2011-2016).

The vascular interventional devices market consists of devices used in both coronary and peripheral endovascular procedures such as balloons, EVAR stent grafts, IVC filters, IVUS & angiography catheters, plaque modification devices, hemodynamic flow alteration(HFA) devices and accessory devices. Coronary stent grafts hold the major share with 64.7% of the total market. The others include balloons with approximately 10% share and other accessory devices such as guidewires, catheters, HFA devices, etc. accounted for 30% share.
