Device makers, hackers come together to protect devices | MassDevice.com On Call

Mass Device

Medical device giant Medtronic comes to the table with software security expert Jay Radcliffe to discuss software security vulnerabilities in medical technologies.

MASSDEVICE ON CALL — Medical device giant and frequent research hacking target Medtronic [1] (NYSE:MDT [2]) joined software expert Jay Radcliffe at a panel discussion in Washington D.C. to discuss security devices.

Radcliffe made headlines last year when he hacked his own insulin pump live on stage at a software security conference in Las Vegas in efforts to highlight vulnerabilities in technologies that patients rely on.

Radcliffe and Medtronic chief privacy and security officer Michael McNeil were both on a panel at the Amphion Forum, computer-security conference.

"It's a very big shift," Radcliffe told Bloomberg [3]. "If you would have asked me ten months ago if I'd be on stage with them at a security conference, shaking hands and saying we're working together to make medical devices safe, I would have laughed. I would have said that's an impossible thing."

[4] Wireless heart devices not so wireless **[5]**
Patient uptake of wireless monitoring for implanted heart devices has lagged because the home-based transmitters require a dial-up land-line phone connection, which fewer and fewer households have.
