More and More Celebrities Are Embracing Hair Restoration

Bio-Medicine.Org

LONDON, Jan. 25, 2011 /PRNewswire/ -- An interesting statistic: more than half (55%) of hair loss sufferers would be more inclined to consider having a hair transplant if celebrities or public figures were more open about hair restoration surgery, and men are more likely to be influenced than women (57% vs. 45%).

Over the last couple of years many male celebs have openly admitted to hair restoration, including Kevin Costner, Mel Gibson, John Travolta, Brendan Fraser, Jude Law and Nicholas Cage. Even Ryan Gigs now admits to a hair restoration therapy, although he is not the only sports icon to undergo hair loss treatment [1]. Cricket legends Shane Warne, Michael Vaughan, Graham Gooch, Greg Matthews and Saurav Ganguly, and English Rugby international Austin Healey are all ambassadors for the **Advanced Hair Studio** – one of the world's largest hair restoration companies.

The truth of the matter is that a majority of men will lose their hair: 40% of men have noticeable hair loss by age 35, 65% by age 60, and 80% by age 80. The point: **hair loss** is nothing to be embarrassed about. If celebs are candid about their **hair loss** then regular folk shouldn't feel ashamed. Especially because baldness [1] can be remedied.

Baldness and **thinning hair** can be treated by a variety of options including, Strand-By-Strand [2] hair restoration, which is a patented procedure that replaces hair, without pain or scarring; Advanced Laser Therapy, which regrows hair with a combination of the latest laser beam technology, an FDA approved regrowth pharmaceutical and a proven scalp and follicle treatment program; Hair Extensions - also known as Flashpoints - which is a hair extension procedure using no glues**,** no waxes and no weaving**.**
