Plastic Solutions for Portability, Miniaturization and Sustainability of Healthcare Applications

Recognizing the increasing prevalence of device miniaturization, a need for greater portability and a desire to find more sustainable solutions, SABIC's Innovative Plastics business will exhibit at MD&M West (booth #1701) its broad and growing portfolio of specialized resins and composites that can help solve today's leading high-tech healthcare device challenges. MD&M West 2013 will run from Feb. 12-14 at the Anaheim Convention Center in Anaheim, Calif.

At their booth, SABIC will be showcasing an expansion of the company's portfolio of healthcare grade materials developed to help OEMs keep pace with trends in infection control. SABIC's exhibit will also underscore the versatility of its advanced materials technologies, many of which are backed by a comprehensive healthcare product policy.

An expert on fibers will be present as a resource to OEMs who are seeking solutions for applications where filtration is a critical requirement. Product and technical experts will also be available to discuss the latest medical device advances and industry trends in miniaturization and patient and staff safety. Additionally, the company will highlight a number of innovative applications that demonstrate how its healthcare plastics are raising the bar on device design, performance, sustainability, and usability of new medical devices.
