Blades Deliver Sharpness, Cleanness, and Safety for Clean Room Operations

MDT Staff

Personna Industrial today announced it will preview a new line of blades designed specifically for Clean Room environments at the Medical Device & Manufacturing (MD&M) West conference and exhibition being held at the Anaheim Convention Center, February 12-14. The new line offers unparalleled performance, safety and cleanness for use in clean room operations and medical device manufacturing.

Personna blades are designed to meet the rigorous clean, safety and sharpness standards of large and small scale manufacturing operations. The company will unveil a variety of products at the MD&M exhibition including contour blades, double edge blades, Personna safety dispensing systems, and single edge blades in a variety of material options and edge geometries – all designed with input from clean room and manufacturing experts.

“Medical device manufacturers of all kinds have found that Personna blade systems deliver the consistent performance they demand in precision operations where extremely tight tolerances are required and safety and cleanness are paramount,” said Bob Senesac, Director of Marketing for Personna. “The new products we will feature at MD&M West deliver on all those requirements while incorporating convenience features not found in other blade systems.”

An integral part of the Personna blade system is the innovative single edge blade safety dispenser unit. Each unit holds up to 100 single edge blades and dispenses single blades with a simple push of a button. The safety dispenser also incorporates an on board used blade storage compartment for added safety when discarding blades.

“This is our first time ever exhibiting at MD&M West and we are excited to gain feedback and insights from attendees on our new products and new concepts so that we can continually enhance the productivity, performance and safety we

provide for the medical industry and medical product manufacturing customers." said Mr. Senesac.
