Temperature Monitoring Device From Digitron Helps Pork Farms Take a Big Bite of the Food Market

Bio-Medicine.Org

TORQUAY, England, September 15, 2011 /PRNewswire/ --

When you're producing 1.8 million baked goods each week product quality and food safety is crucial for brand confidence and sustained business growth.

A Nottingham-based company which specialises in pork pies and other popular savouries and snacks has further enhanced its temperature monitoring process with the latest innovation from Digitron Instrumentation Ltd.

Pork Farms is a large-scale producer and distributor of pork-based bakery products which are sold across the United Kingdom.

The company is celebrating its 80th birthday this year and leads the way in pork pies sales with more than 25 million packs produced and shipped annually.

Food safety management for any producer is of the utmost importance and Pork Farms is making use of state-of-the-art temperature probes which have been developed specifically for a food production environment.

The '8146' temperature probe from Digitron recently completed successful field trials with catering and hospitality organisations who worked with the company to test the device.

The probe is now commercially available and is the first in the latest product range from the company which provides bespoke temperature monitoring solutions to businesses around the world.

Ellen Winters, assistant technical manager at Pork Farms has seen the benefits of the system which has helped her team to monitor conditions at the company's storage facilities in the East Midlands.

She said: "Temperature monitoring is critical for our business as it has to be exactly right at all stages of production to avoid any problems with the product.

"The system we used before was prone to faults as the thermometers regularly cracked and needed to be replaced. We have been trialing the new 8146 temperature probe and it has proved to be far more effective and hard-wearing.

"We check our temperature readin
