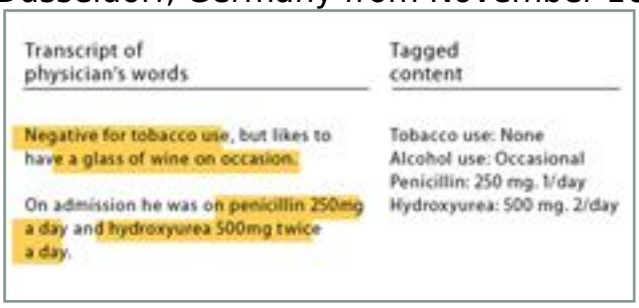
me2me, AG to introduce the next generation of speech recognition technology at Medica 2011 in DÃ¼sseldorf

RealWire

*Transcription workflow & digital dictation solution provided by Frisbee Enterprise including Speech Understanding™ Technology powered by M*Modal.*

Baar, November 10, 2011 – me2me AG [1], the developers of the industry changing Frisbee Transcription Workflow & Dictation Solution with Speech Understanding announced today that they are participating and exhibiting in "Medica-2011", a prestigious world renowned medical exhibition being held in Düsseldorf, Germany from November 16 through 19th.



Transcription

me2me, AG is taking this great opportunity to announce and demonstrate Frisbee Enterprise transcription & dictation platform at this exhibition with a remarkable "Speech Understanding" solution powered by M*Modal. Speech Understanding™ is a solution that interfaces with both "back-end" as well as front-end speech recognition.

Frisbee Enterprise with M*Modal's Speech Understanding™ provides functionality that goes beyond traditional speech recognition and enables Healthcare Organizations to efficiently create high quality, meaningful clinical documentation at an affordable price. Where traditional speech recognition turns audio into flat text, M*Modal's Speech Understanding automatically translates a physician's dictation into a structured, meaningful and understandable document. When created and shared, it provides the most effective way to populate an EHR/EMR system or specialty information systems, such as radiology, pathology and emergency department, with structured, interoperable clinical documentation. This is all done to help our clients save time, money, and reduce stress.

*"Our efforts are to help the healthcare community where Speech Recognition is a feature widely requested and needed by users" said Peter Hauser CEO of me2me AG. "The M*Modal's cloud-based software is a technology that does not require the physicians to spend time "training" the software or that needs any special*

hardware, such as servers. This is just one of the many things that clearly set us apart from other solutions. We feel we are better equipped to help the "ever evolving" healthcare facilities while reducing their costs.

*"We are very proud of the technological agreement signed with M*Modal whose solution is used by seven of the top ten medical transcription service organizations in the US", continued Peter Hauser. Thanks to M*Modal Speech Understanding solution, me2me will be able to offer its dictation and workflow management solution Frisbee to all size healthcare customers, including single providers. We will also be able to enhance our offerings to include the European markets by adding multiple languages such as German and French, to name a few."*

M*Modal's solution is hosted in a secure and stable off-site data center where customers can connect from any secure connection. Frisbee Enterprise is also connected to the secure data center and manages all the clinical notes, reports, and documents in a secure manner.

As a result of this strategic partnership, me2me is now able to offer a very unique and stable solution to its current and future clients. This enables all clients to easily convert speech into their own customized structured clinical formats. The Speech Understanding technology feature powered by M*Modal is an optional feature with the Frisbee Enterprise solution.

About M*Modal
M Modal is a technology developer that provides the healthcare industry with Speech Understanding™ solutions, a unique combination of native speech recognition and natural language understanding (NLU) that goes beyond basic speech-to-text conversion and creates structured, clinically encoded documents.
