AACR and Kure It Partner to Offer a New Grant for Kidney Cancer Research

AACR

Grant nominations are now open: Deadline is Tuesday, August 21, 2012.

PHILADELPHIA — The American Association for Cancer Research is pleased to announce a new partnership with Kure It and a call for nominations for the 2012 AACR-Kure It Grant for Kidney Cancer Research.

This two-year grant represents a joint effort to promote and support innovative kidney cancer research. The grant will support a translational research project designed to improve the survival and quality of life of patients with kidney cancer and, in turn, lead to individualized therapeutic options for the treatment or development of promising new kidney cancer therapies.

The grant recipient will receive $250,000 over the grant term (a two-year period) and complimentary registration to the AACR Annual Meeting 2013 [1], to be held April 6-10 in Washington, D.C., where the recipient will be recognized.

Independent investigators are invited to submit proposals to develop and study new ideas and approaches that will have a direct application and relevance to patients with kidney cancer. The grant recipient will be selected by an expert scientific review committee of kidney cancer specialists assembled by the AACR.

The application deadline for the 2012 AACR-Kure It Grant for Kidney Cancer Research is at noon ET on Tuesday, Aug. 21, 2012.

The American Association for Cancer Research and Kure It are committed to sustaining the grant in a collaborative fashion to award research funding to the most promising kidney cancer research project. Learn more [2] about the program guidelines and application eligibility criteria.
