This report studies the global proteomics market, with forecast to 2017.

Proteomics, over the last decade, has gained importance in the field of diagnosis and drug research and development and is poised to grow at a healthy pace mainly due to increasing innovations and developments in the field of proteomics instrumentation, availability of funds from various organizations and increasing research & development expenditure. However, the economic slowdown, and lower adoption rate due to expensive tools and instruments will restrict the growth of this market to a certain extent.

The geographies covered in this study are North America, Europe, Asia, and Rest of the World (RoW). These four regions are further segmented by major countries; the geographic split for all the sub-segments is presented at the regional and country levels. North America is the largest market for
