About Us:

Cactus Semiconductor (Cactus) provides our customers with the optimum solution to their custom analog and mixed signal integrated circuit requirements.

Cactus Semiconductor is a fabless semiconductor company. We offer full turn-key product design and production as well as integrated circuit design services, circuit and physical design. Our expertise in power management and analog circuits find value in products targeted toward medical and portable applications.

Our staff's experience results from years of work at high profile medical device and power management semiconductor companies. Our medical focus in integrated circuit design encompasses both implantable and portable applications such as neuro stimulation, pacing, defibrillation, ultrasound, and medical monitoring (ex: Glucose Meters). Our power management development efforts find use in cellular, audio, and other portable products.

We have world class, in-house expertise in designing and producing state of the art analog integrated circuits. Our manufacturing is conducted at the premier wafer fabrication, wafer probe, IC assembly and IC test facilities throughout the world. Our process experience includes CMOS, BiCMOS, SiGe and Bipolar with geometries from 90nm to 8.0 micron. Cactus Semiconductor is ISO 9001:2008 qualified.
