### About Us:

Mikrotech is a leading full service micromanufacturer of **custom designed components** and subassemblies for medical devices used in **minimally invasive surgery (MIS)**. The company's micromanufacturing processes overcome the limitations of established technologies, facilitating smaller components with more complex features and higher precision tolerances.

As a **full service micromanufacturer** Mikrotech offers a **comprehensive range** of services to support MIS designers and manufacturers in all phases of the product development cycle:

- Micromachining
- Micromolding
- Insert micromolding
- Micro subassembly
- Design and manufacturing engineering assistance

The key to our success as a full service micromanufacturer is **utilizing best-in-class plastic micromachining and micromolding equipment** specifically designed for micromanufacturing. Mikrotech offers multi-axis CNC and Swiss screw plastic micromachining for prototype and short run production and plastic injection micromolding for longer and larger production runs. As a full service micromanufacturer Mikrotech provides MIS designers and manufacturers the ability to work with one supplier during the entire product verification and validation stages.
