About Us:

From Mind to Manufacturing

Founded in 1984, PTI Engineered Plastics is a privately held company. We started as specialists in product development, prototyping and low-volume manufacturing. As our customers' needs grew, so did we. The evolution moved us into the higher-volume manufacturing services arena while still maintaining our core ability to develop products. Today, we have an industry-leading advanced product development team that provides innovative solutions from designing for manufacturability, complex problem solving and helping to streamline your project.

On average, 50% of the company's business is comprised of prototyping and short-run manufacturing. A typical customer will often approach us with a product vision and the need to get their product to market quickly, but without compromise to design or material. We meet this challenge with the PTI Production Prototype (P3™) — a proprietary process that provides customers with a single tool that meets both their quality and timeline requirements.

As PTI Engineered Plastics moves forward, it is our goal to become the preferred supplier for customers that require and value the services within our business strategy.

Our customers not only have a need for the services we provide, but they also trust us to deliver their products to market faster than our competitors.
