About Us:

Specialty Silicone Fabricators is on a mission to be the worldwide leader in manufacturing medical silicone, bioresorbable materials and medical device-drug combination components.

At SSF, we are dedicated to a manufacturing philosophy based on a total, collective commitment to quality at every level. We believe that "QUALITY" is an attitude that is developed and applied at all levels through pride of workmanship, recognition of performance, and a positive and healthy work environment.

We have collaborated with over 250 clients in 17 countries, producing over 1,100 components designed to improve patients' lives. By leveraging our numerous patents, we've earned the reputation as an innovator in silicone extrusion, molding, sheeting and dipping. As leaders in drug eluting technology, SSF is uniquely positioned to facilitate the design and development of combination products for a whole new class of therapy delivery.

Extrusion

Our patented Geo-Trans® Extrusion Process offers the ability to change profiles on the fly, eliminate seams and has revolutionized silicone extrusion.

Molding

Our industry-leading expertise in silicone molding combines state-of-the-art equipment with vital scientific knowledge.

Sheeting

We offer custom silicone sheeting fabrication and can fabricate silicone sheeting from as thin as .0254mm.

Dipping

SSF's dipping technology allows us to apply layers of silicone (thickness starting at 0.0254mm) to other substrates, components, or devices.

Drug Device Components

At SSF, we are licensed and registered for both device and drug manufacturing. Medical devices combined with drug or biologic components provide targeted delivery at higher doses, with reduced side effects and improved patient compliance.
