About Us:

I would like to introduce you to a new stellar company that was officially launched August 15, 2012. It is unique, because it Designs and Builds Ambulatory Surgical Centers (Out-patient Surgery Centers) in 12 weeks with either 2 Operating Rooms or 4 Operating Rooms. This can't be duplicated by the Traditional Design and Build of today that takes 12 or 16 months. The New Hybrid Facilities will look and function like the Traditional Design and Build

Worldwide Surgical Solutions

Facilities with the Normal Exteriors and Interiors, but the KEY ISSUE is you Save Time and Time Matters. Time Matters to the Patient, who needs surgery now and doesn't have to wait. Time Matters to the Surgeon, who needs to get his patients operated on in a timely manner, and Time Matters to the Investor or Banker to get the Ambulatory Surgery Center up and operational to profess a Cash Flow.

The processes used to build the Facilities are produced by a combination of both NASA Lunar or Space Architects and Engineers and Traditional Architects and Engineers in the Ambulatory Surgical Center and Specialty Hospital Arenas. It took three years of Research and Development and working with different Modular Fabricators and Traditional Builders across the USA to come up with our Hybrid Concept 1. September 1st , 2012, we released our Specialty Hospital Model after working on it; since, 2010.

We can Design and Build a Specialty Hospital with 10 to 20 Patient Rooms, 4 to 10 Operating Rooms, 2 Heart Catheterization Rooms, CT/MRI/Digital X-Ray along with all of the required departments per each U.S. state in 24 weeks, not the Traditional 24months or more.

The Ambulatory Surgery Center Association and Scott Becker Communications out of Chicago and others have said that this is, Ground Breaking News for the ASC and Specialty Hospital Industries.
