

New Data Demonstrates Victoza[®],[®] (liraglutide rDNA injection) Provided Superior and Sustained Blood Sugar Control and Weight Reduction Compared to Januvia[®],[®] (sitagliptin) at 52...

Bio-Medicine.Org

ORLANDO, Fla., June 26 /PRNewswire-FirstCall/ -- Poster 16LB -- Late-breaking Novo Nordisk (NVO) extension data presented today at the 70th Annual Scientific Sessions of the American Diabetes Association (ADA) showed that once-daily Victoza[®] in combination with metformin produced sustained and significantly greater reductions in A1c, body weight and fasting plasma glucose (FPG) than Januvia[®] plus metformin at 52 weeks.

Key findings from the study include:

- Patients treated with 1.2 mg and 1.8 mg of Victoza[®] experienced greater reductions in A1c than those treated with Januvia[®] 100 mg (-1.3% and -1.5% versus -0.9%)
- Victoza[®] provided greater weight loss versus patients treated with Januvia[®] (2.8 kg [6.16 lbs] and 3.7 kg [8.14 lbs] for 1.2 mg and 1.8 mg respectively, 1.2 kg [2.64 lbs] for Januvia[®])
- Victoza[®] provided greater change from baseline FPG readings than those treated with Januvia[®] (-1.7 mmol/L and -2.0 mmol/L for 1.2 mg and 1.8 mg respectively, versus -0.6 mmol/L)
- Patients treated with Victoza[®] 1.8 mg reported significantly greater treatment satisfaction than those treated with Januvia[®]

"What is so encouraging about these data is that Victoza[®] at both doses was more effective than Januvia[®] at achieving blood sugar control in people with type 2 diabetes over a period of one year. Patients who began the trial with higher A1c levels achieved greater reductions in A1c with treatment with Victoza[®]," said Dr. Richard Pratley, of the Diabetes and Metabolism Translational Medicine Unit, University of Vermont College of Medicine, Burlington. "Altho
