

Waismann Method Extends Aid in an Effort to Make Treatment More Widely Available

Bio-Medicine.Org

BEVERLY HILLS, Calif., Oct. 13 /PRNewswire/ -- In support of recent and upcoming national drug take-back programs encouraging people to surrender unused, unwanted and expired medications, the medical professionals who perform the [Waismann Method of Opiate Detoxification](#) [1] today announced they will reduce the total cost of the pioneering rapid detoxification treatment in an effort to make treatment more widely available to those suffering from prescription painkiller dependency. Beginning October 15, the Waismann Method will lower the cost of treatment by approximately 10 percent, offering more patients a chance at recovery. Individuals will have the opportunity to take advantage of this reduced rate from October 15 - 30.

With recent [reports](#) [2] revealing prescription drug abuse and accidental overdoses have continued to increase at a rapid pace, the Waismann Method remains committed to helping people fight prescription painkiller dependency by raising awareness of the potential dangers of such drugs. Furthermore, the Waismann Method supports and encourages individuals, family members, friends and loved ones to take part in an upcoming event, [The American Medicine Chest Challenge](#) [3], which will take place on November 13.

The American Medicine Chest Challenge is a community-based public health initiative sponsored by [The Partnership for a Drug-Free America](#) [4], whose mission to increase awareness aligns with that of the Waismann Method. This one-day program will allow people to surrender their unused, unwanted and expired medications at drop-off locations in communities across the country.
