

## **Mind Technologies Inc. Developing Revolutionary EEG Brain Computer Interface**

Bio-Medicine.Org

CARDIFF, Calif., May 24, 2011 /PRNewswire/ -- [Mind Technologies, Inc](#) [1]. (<http://mindtechnologiesinc.com> [2]) (Pink Sheets: [MTEK](#) [3]), announces the progress being made on The Company's proprietary EEG/ BCI headset, which is currently in development. With The Company's mission to become the world leader in EEG/ BCI technology, Mind Technologies assembled a world-class team of scientists to guide the process of developing a state-of-the-art headset that would revolutionize the brain computer interface industry. After meeting with and interviewing several top-tier electronics firms, The Company has selected a development and manufacturing partner to accomplish this monumental achievement.

No expense in research, functionality, or design has been spared to bring the most advanced product to market. The Company selected will oversee the entire project, including circuit design, software and Bluetooth integration, prototyping and manufacturing. The final product to be sold to consumers will be much smaller, more reliable and use dry sensors to detect brain signals. "The design of the product is completely different than anything currently on the market and will be virtually undetected when worn," stated Brent Fouch -CEO.

The product is currently going through the patent process, as the prototype phase commences. Once The Company receives three prototypes to choose the final design, manufacturing will commence immediately. Mind Technologies has negotiated very reasonable price points that should have a significant impact to The Company's bottom line. Upon completion, The Company will offer the complete system to consumers, including the revolutionary BCI headset and thought controlled software applications developed by Mind Technologies. The C
