

Precyse Announces Commercial Release of Revolutionary Intelligent Workflow Solution for Health Information Management

Bio-Medicine.Org

WAYNE, Pa. and ALPHARETTA, Ga., May 3, 2011 /PRNewswire/ -- [Precyse](#) [1], a leader in health information management (HIM) services and technologies, announces the general availability of [precyseCode™](#) [2], the most advanced and comprehensive health information management platform available today. PrecyseCode is driven by state-of-the-art technologies that understand and process human voice, converting it to text and transforming it to information. Now commercially available, the precyseCode software features Computer-Assisted Coding that uses unique [Natural Language Comprehension™ \(NLC\)](#) [3] to create a patient's clinical story, allowing for the assignment of appropriate, compliant ICD-9 and ICD-10 diagnosis codes, procedure codes and SNOMED clinical terminology.

NLC is achieved through the unique combination of [M*Modal's](#) [4] contextual understanding technology with Precyse's collaborative technology platform and extensive coding and clinical documentation expertise. PrecyseCode is the industry's first computer-assisted and NLC-driven intelligent workflow solution. This powerful combination provides a single, comprehensive platform to optimize coding processes, accelerate revenue cycles, and support healthcare organizations as they navigate through compliance challenges, [Clinical Documentation Improvement \(CDI\)](#) [5] initiatives, migrate to [ICD-10](#) [6], and meet health reform and **Meaningful Use** initiatives head on.

"While accurate and efficient coding may be at the heart of the overwhelming challenges facing healthcare providers today
