

iHealth Lab's Blood Pressure Self-Monitoring System Gets Nationwide Distribution

Bio-Medicine.Org

NEW YORK, June 22, 2011 /PRNewswire/ -- (Digital Experience!) -- iHealth Lab Inc., the pioneering designer and manufacturer of digital personal healthcare products including the iHealth BP3 Blood Pressure Monitoring System for iPhone, iPod touch and iPad, today announced that multiple national retail chains will now distribute their innovative Blood Pressure Monitoring System. The BP3 Blood Pressure Monitoring System is now available in all Apple retail stores throughout the US and Canada, as well as through Apple online and Costco.com. It will be available at Bestbuy.com, Kohls.com and Target.com this July and in stores at Target and Best Buy in Q4.

How It Works

The iHealth Blood Pressure Monitoring System lets users measure and track their blood pressure and heart rate from the convenience of their iPhone, iPod touch and iPad. The system comes with a blood pressure arm cuff and a portable, battery-powered dock allowing for quick and easy set up. The dock also doubles as a charging station for all three iOS devices.

The companion iHealth App includes an easy-to-use interface with data and graphics that allow the user to view their blood pressure numbers, track them over time, and run reports. Users can easily access previously recorded data sets, view patterns by date and time of day and create custom graphs and charts. Users can also instantaneously share the results with their doctor, or loved ones.

Availability, Compatibility and Price

In addition to the national retailers, the iHealth Blood Pressure Monitoring System (battery-powered docking station and blood pressure arm cuff) is also available for purchase for \$99.95 from <http://www.ihealth99.com/> [1].

The companion iHealth App is available for free from the App Store on iPhone, iPod touch and iPad, or at [_](#) [2]
