

## **Curetis AG to Present Its Unyvero System for Pneumonia Diagnostics**

Holzgerlingen, Germany -- Curetis AG, an innovative molecular diagnostics company focusing on the development and commercialization of in-vitro diagnostic products for infectious diseases, today announced the presentation of its Unyvero™ System and the Unyvero™ P50 Pneumonia Cartridge during the European Congress of Clinical Microbiology and Infectious Diseases (ECCMID) in London.

The showcasing will be accompanied by the Curetis-sponsored Integrated Symposium "Bacterial Pneumonia and Emerging Antibiotic Resistance", which will focus on pneumonia-causing pathogens, their respective antibiotic resistances, and the relevance of multiplexed molecular diagnostic testing. The event will be chaired by clinical microbiologist and molecular diagnostics specialist Prof. Christine Ginocchio (North Shore-LIJ Health System School of Medicine, New York), and Prof. Keith Klugman (Emory University, Atlanta), the worlds premier expert on antibiotic resistance among pneumococcal bacteria.

The Unyvero™ System is a versatile hardware platform for the detection of a broad panel of bacteria and antibiotic resistances from a single sample in one run. It processes a disposable cartridge providing the necessary reagents to complete the analysis from sample to report. The Unyvero™ P50 Cartridge is the first cartridge developed by Curetis AG and focuses on pathogen as well as antibiotic resistance testing for pneumonia. Each cartridge handles one patient sample and simultaneously analyzes 39 DNA targets. Results are available within less than 4 hours.

"We are very happy to introduce our product during the ECCMID conference in the presence of eminent specialists in pneumonia infections, antibiotic resistance and molecular diagnostics," said Oliver Schacht, CEO of Curetis. "Severe acute infections and growing antibiotic resistances are a major burden for today`s health care systems and treatment is often impaired by insufficient, slow diagnostics. By providing a novel technology for the fast, precise and automated diagnosis of infectious disease agents and their antibiotic resistances, we hope to contribute to improved clinical outcomes and to limit the risk of even further increasing antibiotic resistances in the population."

The symposium will take place on April 1, 2012, from 4pm to 6pm in Capital Suite H (level 3) at the international exhibition and convention centre ExCeL, London. Symposium speakers include Prof. Jean-Louis Vincent (Erasmus University, Brussels), Prof. David Livermore (University of East Anglia), and Prof. Ingo Autenrieth (University of Tuebingen). Talks will be followed by a panel discussion on the clinical relevance of faster molecular testing with contributions by Prof. Christine Ginocchio and Antonio Torres (University Clinic, Barcelona). Following the event, Curetis will host a presentation of the Unyvero™ System, including an address by Prof. Carl Erik Nord, Karolinska University Hospital and a reception (6pm, meeting
