

## **Surveyed Healthcare Providers Cite Access to EHR Data as Top Desire for Mobile Technology**

The Associated Press

CARROLLTON, Ga.--(BUSINESS WIRE)--Mar 28, 2012-- Greenway Medical Technologies, Inc. today announced the availability of its remote clinical and financial solution PrimeMOBILE(TM) as a native application for download onto Android smartphone and tablet devices.

PrimeMOBILE integrates functionality accessed onto handheld devices directly with Greenway's single-database electronic health record (EHR), practice management and interoperability solution PrimeSUITE(R).

The announcement follows the availability of PrimeMOBILE's native applications for Apple phones and tablets completed last summer.

PrimeMOBILE provides password-protected, remote access of patient data such as clinical documents, diagnostic scans and lab results through patient search and filter functions. The solution streamlines workflows during patient encounters by enabling providers to graph vitals, add notes to patient summaries and communicate with staff during hospital rounds or from virtually any location.

PrimeMOBILE's administrative and financial capabilities integrate charge capture and confirmation through access to CPT and ICD codes and the ability to instantly route charges and notes to PrimeSUITE for review and posting. This helps accelerate billing cycles and reduce lost charges.

As well as noting EHR integration as the main functionality desired, a survey of 3,798 providers by the medical learning network QuantiaMD found that 83% currently utilize a mobile technology, and that fully 93% were most likely to purchase an Apple or Android device.

The survey also reflected the rise in tablet usage by medical professionals. It noted that 30% of participants were already using a tablet at the time of the survey, and another 44% said they intend to utilize a tablet in the future. A quarter of the surveyed providers reported they are using both a smartphone and a tablet for clinical and administrative functions.

The findings correspond to a Manhattan Research study that estimated mobile smartphone usage in healthcare settings would total more than 80% of providers by the end of 2011.

"Innovation and efficiencies can drive the advancement of smarter healthcare delivery," said Greenway(R) President and CEO Tee Green.

## Surveyed Healthcare Providers Cite Access to EHR Data as Top Desire for M
