Delcath Receives European Regulatory Approval for Second Generation Hemofiltration Cartridge

The Associated Press

Delcath Systems, Inc. (NASDAQ: DCTH) today announced that the Company has received CE Mark approval for the second generation hemofiltration cartridge of the Company's proprietary Hepatic CHEMOSAT@ Delivery System. With the new hemofiltration cartridge, the CHEMOSAT system carries the same broad indication as the previous generation system, permitting physicians to use the product for the percutaneous intra-arterial administration of a chemotherapeutic agent (melphalan hydrochloride) to the liver to any patient who in their opinion may benefit.

"With receipt of CE Mark for our second generation CHEMOSAT system, we will now be able to supply centers in Europe with a product that we believe offers improved filtration efficiency compared to the previous generation filter used in our clinical trials," said Eamonn P. Hobbs, President & CEO of Delcath Systems. "The new hemofiltration cartridge has demonstrated melphalan removal of greater than 98% during drug infusion in an in vivo study. Additionally the new filter removed significantly fewer blood platelets in the same study.

"With the new hemofiltration cartridge, we believe that CHEMOSAT may help to improve the management of side effects on treated patients and potentially complement other systemic cancer therapies, leading to greater system utilization. We look forward to the first European commercial procedure using the new filter, which is scheduled for next week," Mr. Hobbs added.

CE Marking confirms that a medical device complies with the Essential Requirements of the Medical Device Directive, and that the device has been subjected to conformity assessment procedures. Receipt of the CE Mark allows Delcath to market and sell its Class III medical device in countries in the European Economic Area (EEA). Delcath's new hemofiltration cartridge's design and technology is patent pending.

About Delcath Systems Delcath Systems, Inc. is a specialty pharmaceutical and medical device company focused on oncology. Delcath's proprietary system for chemosaturation is designed to administer high dose chemotherapy and other therapeutic agents to diseased organs or regions of the body, while controlling the systemic exposure of those agents. The Company's initial focus is on the treatment of primary and metastatic liver cancers. In 2010, Delcath announced that its randomized Phase III clinical trial for patients with metastatic melanoma in the liver had successfully achieved the study's primary endpoint of extended hepatic progression-free survival. The Company also completed a multi-arm Phase II trial to treat other liver cancers. The Company obtained authorization to affix a CE Mark for the Delcath Hepatic CHEMOSAT@ delivery system in April 2011. The right to affix the CE mark allows the Company to market and sell the CHEMOSAT system in

Europe. The Company has not yet received FDA approval for commercial sale of its system in the United States. The Company continues with the preparation of its NDA submission and intends to seek FDA approval for commercial sale of its chemosaturation system with melphalan.
