

Medical Marijuana Inc. Product, CanChew Bio-Technologies

The Associated Press

Medical Marijuana Inc. (OTC: MJNA), a leading hemp industry innovator, is pleased to welcome Dr.

Philip Van Damme, Director for CanChew Biotechnologies, to Small Cap Voice's Internet radio network. Dr. Van Damme, a Netherlands-trained surgeon, is eager to share why and how he invented the revolutionary Non-THC CanChew gum. Its tremendous medical potential will offer a new treatment for pain-afflicted people in the U.S. and beyond.

The interview below, which is conducted by Small Cap Voice Internet radio host Stuart T. Smith, provides valuable insight into the history of CanChew Biotechnologies, which will announce a soft release product launch on September 15th in the U.S. with international markets to follow.

In the program, Dr. Van Damme points out that an important part of CanChew lies in its non-stigmatizing, legal medical delivery system.

Unlike the harmful means of smoking medicinal marijuana, this specialized gum transports Non-THC cannabinoids through the body with the simple ease of the societally accepted act of chewing gum.

Its potential value to patients? Immense, Dr. Van Damme says. Chronic pain sufferers, beginning and end stage cancer patients, even a person with anorexia, can see relief with CanChew. Dr. Van Damme adds that he put his heart into developing this product because patients in deep pain continuously confront him. He believes CanChew is a new vehicle-unlike any other on the market-that can offer them relief. As revenues of the product grow, he plans on using a portion to reinvest in scientific studies that continue to establish its medicinal potency.

The delivery of these medications via the oral mucosa provides for rapid and near complete absorption directly into the systemic circulation. This leads to rapid onset of effects and increased bioavailability. Pre-systemic metabolism is thus avoided. This system of delivery offers clearly improved economic
