

Pancreatic Cancer Action Network-AACR Grants Program Offers More Than \$4 Million for Pancreatic Cancer Research

AACR

Applications Invited for 2013 Research Grants

PHILADELPHIA — The American Association for Cancer Research and the Pancreatic Cancer Action Network are pleased to announce the opening of the 2013 research grants program.

Five grant mechanisms are being offered to support research that has direct application and relevance to pancreatic cancer. For 2013, the grants portfolio includes a new grant mechanism called the Pancreatic Cancer Action Network-AACR Research Acceleration Network Grant, which was developed to respond to emerging needs in the pancreatic cancer research community. The grant is designed to fast-track an existing pancreatic cancer research project that is ready for next steps and includes a clinical component that will have patient benefit.

“Pancreatic cancer is a very challenging disease, and one that urgently requires research that will improve prognosis,” said Margaret Foti, Ph.D., M.D. (h.c.), chief executive officer of the AACR. “The AACR is proud to partner with the Pancreatic Cancer Action Network on several grant opportunities to advance cancer research and improve diagnosis and treatment of this devastating disease.”

“We are thrilled to provide a record-high total of more than \$4 million in research funding through the 2013 grants program. Our expansion to five grant mechanisms will help us further meet the needs of the pancreatic cancer research community,” said Julie Fleshman, president and chief executive officer of the Pancreatic Cancer Action Network. “Our goal is to fund innovative research, grow the number of researchers working in the field, foster collaborations across disciplines and institutions, and expedite scientific progress for patient benefit.”

Approximately every 12 minutes, another American is diagnosed with pancreatic cancer. Pancreatic cancer is the fourth leading cause of cancer death in the United States, and is the deadliest among leading cancer killers with a five-year survival rate in the single digits, at just 6 percent.

“In an effort to meet our goal of doubling the survival rate for pancreatic cancer, the organization is excited to offer for the first time a new grant mechanism, the Research Acceleration Network Grant, which is intended to fast-track a promising research project that is already under way within the pancreatic cancer community,” added Lynn Matrisian, Ph.D., vice president of scientific and medical

affairs at the Pancreatic Cancer Action Network. "The \$1 million grant represents the largest single grant funded through our grants program. We are hopeful this grant will provide a significant boost to a project that will ultimately lead to an early detection method or treatment option for pancreatic cancer patients."

Through the Pancreatic Cancer Action Network-AACR Grants Program, funding is available for postdoctoral and clinical research fellows, and junior and senior researchers. Since the grants program was introduced in 2003, \$12.7 million has been awarded to accelerate pancreatic cancer research.

Submissions must be completed online using the proposalCENTRAL website at <https://proposalcentral.altum.com/> [1]. Funding decisions will be announced in March and the grant term will begin July 1, 2013. Please see below for grant deadlines.

Applications are being accepted for the following grant mechanisms:

Research Acceleration Network Grant

This new grant mechanism provides \$1 million over one to three years to support a project currently under way within the pancreatic cancer research community that is ready to be accelerated, includes a clinical component and will help double the survival rate for pancreatic cancer by the year 2020. The grant is open to independent investigators and needs to be implemented by at least two co-principal investigators from distinct institutions.

The deadline for the Letter of Intent is Oct. 8, 2012.

Innovative Grant

The Innovative Grant is a two-year grant totaling \$200,000 to support the development of new and innovative ideas and approaches, including those successful in other areas of cancer that have promise for pancreatic cancer. The grant is open to independent junior or senior investigators.

The deadline for the Letter of Intent is Oct. 8, 2012.

Career Development Award

The Career Development Award is a two-year grant totaling \$200,000 to support newly independent investigators develop or strengthen their research program in pancreatic cancer.

The application deadline is Oct. 31, 2012.

Pathway to Leadership Grant

The Pathway to Leadership Grant is a five-year grant totaling \$600,000 that is designed to build future leaders in the pancreatic cancer research community by supporting the most highly promising postdoctoral or clinical research fellows during their mentored research and continuing through their transition to independence.

The application deadline is Oct. 31, 2012.

Fellowship

The Fellowship is a one-year grant totaling \$45,000 to support a postdoctoral or clinical research fellow during the mentored research phase.

The application deadline is Oct. 31, 2012.
