

MonitorForHire.com Releases New Mobile Application

Bio-Medicine.Org

CONSHOHOCKEN, Pa., Sept. 4, 2012 /PRNewswire/ -- MonitorForHire.com, a patented, web-enabled management tool for locating and contracting independent clinical research monitors, today announced the release of their free mobile application. The app, which is designed for clinical research monitors registered with MonitorForHire.com, is available via Apple's App Store and Android's Google Play Store.

The application enables monitors to keep track of their current projects, view and receive open project invitations, log time, submit availability, and stay in touch with all of MonitorForHire.com's opportunities. Monitors now have the ability to access opportunities directly from their mobile device using the project invitation feature; a function that also benefits Contract Research Organizations (CROs), Pharmaceutical, Biotech and Medical Device companies, and Academic Institutions by bringing staffing opportunities to monitors on the move.

"Pushing the boundaries of technology has enabled us to further our goal of advancing clinical workforce solutions," said Scott Freedman, Founder and President of MonitorForHire.com. "We were ahead of the curve when we launched our online service 12 years ago, and now the launch of our mobile app has allowed the efficiency and speed of our service to progress through continued innovation."

Scott continued, "We're constantly looking for ways to improve our services and provide monitors and sponsors with the best experience possible."

MonitorForHire.com will be showcasing the application at the Fourth Annual Outsourcing in Clinical Trials New England Conference being held on September 25-26th. The event will focus on exploring the clinical trial space to pinpoint challenges and opportunities that can help drive efficiency and effectiveness within clinical outsourcing.
