

## **West Announces the Commercial Launch of the B.safe Syringe Safety System Technology Platform**

West Pharmaceutical Services

[West](#) [1], a leading global developer and manufacturer of components and systems for injectable drug delivery, announces the commercial introduction of its [B.safe™](#) [2] syringe safety system. West acquired the IP and rights to this system in 2011 and has completed the product development and first phase of commercial scale-up at its safety systems manufacturing center in France. Significant scale-up to high-volume manufacturing will be achieved in the first half of 2013, in order to meet market demands.

The system is designed to help protect against needlestick injury when using a prefilled syringe and will complement West's portfolio of prefilled syringe offerings and technologies. West's portfolio includes the [NovaGuard™](#) [3] passive needle system for Luer Lock syringes and the éris™ system, of which more than 1 billion units have been manufactured and used in the market with exceptional performance in the hands of healthcare workers and patients.

"We are delighted to reach this significant milestone and be in a position to offer our customers a globally available safety system, leveraging our established expertise around prefilled syringes and needle safety," said Glenn Thorpe, Vice President, Strategic Market Development, Syringe Systems. "With the completion of the steps necessary to offer this system commercially, we are in position to meet growing market demand in this area, and are pleased to have already signed our first commercial agreement and commenced shipments."
