

Legal: Airstrip sues over iPhone patient monitoring patents

Mass Device

AirStrip Technologies files a lawsuit against mVisum over recently issued patents for remote patient monitoring with an iPhones, iPads and other mobile devices.

Mobile health company AirStrip Technologies filed a lawsuit this week against mVisum over recently issued patents for remote patient data monitoring on iPhones, iPads and other smartphones.

AirStrip in late August won the patents in question, which detail the process of "mobilizing" physiologic data for smartphones, tablets and other mobile devices.

Rival mVisum also develops mobile solutions for receiving, viewing and responding to patient data, including EKGs, alarms and MRIs, among others.
