

RBCC: Short R&D Timeline Could Lead to Larger Profits

The Associated Press

NOKOMIS, Fla.--(BUSINESS WIRE)--Nov 19, 2012--As Rainbow Coral Corp. looks ahead to a successful 2013, the company has placed a high priority on initiating projects that will realize profits quickly.

The first project to be fast-tracked will be the company's joint venture with Amaranthus BioSciences (OTCBB: AMBS). Both companies forswear realizing revenues from the impending commercialization of Amaranthus' NuroPro, a sophisticated test developed to more accurately and easily diagnose Parkinson's disease. NuroPro works by identifying differentiated levels proteins and peptides in the blood of patients who have the disease.

RBCC and Amaranthus expect to finalize NuroPro's development timeline within the next 12-14 months. By cutting the typical timeline from years to only one year, RBCC and its shareholders believe they will see larger profits more quickly from the deal.

The shortened timeline became a possibility last week when Amaranthus secured over \$1.1 million in funding through two separate transactions. RBCC plans to invest in the ongoing development of NuroPro and to be repaid for its investment out of proceeds from the sales generated by the revolutionary diagnostic blood test.

If milestones are met, RBCC will then share in its revenues sooner than originally anticipated, once the initial investment is repaid.
