

Masimo debuts 1st iPhone pulse oximeter

Mass Device

Medical device company Masimo unveils the iSpO2, the 1st Apple-approved pulse oximetry system compatible with iPods, iPhones and iPads.

Medical device maker [Masimo](#) [1] (NSDQ:[MASI](#) [2]) today unveiled its iSpO2, a novel pulse oximetry system for use with iPods, iPhones and iPads, the company's 1st consumer-marketed product.

Patients can use the iSpO2 device to measure blood oxygenation, pulse rate and a perfusion index using a finger sensor and a cable that connects to their mobile devices.

The Irvine, Calif.-based medical device company is the 1st to bring an iOS-friendly pulse oximetry system to the market, using technology from its existing line of pulse oximeters and CO-Oximeters used in clinical settings.
