

FDA clears Tensys Medical's non-invasive blood pressure monitor

Mass Device

Tensys Medical lands FDA clearance for its TL-300 non-invasive hemodynamic patient monitoring system.

San Diego-based Tensys Medical this week won FDA clearance for its next generation TL-300 hemodynamic patient monitoring system.

The non-invasive TL-300 device provides physicians with a stream of real-time patient waveform and blood pressure data in a manner the company says isn't possible with traditional non-invasive devices.
