

Revolutionary New 12-Lead ECG/EKG Device Works Wirelessly With Any Android Cell Phone or Tablet

PR Newswire

ELLICOTT, Md., Jan. 17, 2013 /PRNewswire/ -- Nasiff Associates announces the release of the first 12-lead EKG machine available on a tablet or smartphone. The [CardioCard Mobile](#) [1] is a wireless 12 lead [EKG](#) [2] machine with interpretation. The CardioCard Mobile is the first ECG machine with the ability to run a 12-lead wireless ECG test directly on Android tablets and smartphones, turning the portable device into a fully-functioning [electrocardiogram](#) [2] machine. Now you can provide expert ECG analysis to patients in the doctor's office or halfway across the world.

After performing an ECG, the CardioCard Management System performs further analysis and the ability to print reports. [EMR connectivity](#) [3] assists with wireless record management, reducing errors and allowing immediate remote reviews. A PDF output option ensures a universally compliant format for storing and exchanging ECG data. Gain the combined power of advanced ECG technology with the versatility to store and send data.

The CardioCard Mobile provides the ultimate portable ECG solution. For more information, contact John Gladstein at 877-646-3300 [or click here for more information](#) [1]. A demonstration video is [available here](#) [4].
