

Notable Solutions, Inc. Successfully Demonstrates Healthcare System Interoperability at IHE North American 2013 Connectathon

The Associated Press

Notable Solutions, Inc., (NSi) a leading provider of paper and electronic data capture and print stream management solutions, announced today that it has successfully completed interoperability testing at the Integrating the Healthcare Enterprise (IHE) North American 2013 Connectathon. During the weeklong event held in Chicago, NSi successfully passed 100 percent of its HL7 C-CDA based exchanges and demonstrated interoperability with leading Electronic Health Record (EHR) applications from industry vendors.

The IHE North American Connectathon provides interoperability and connectivity testing of health information systems in an effort to improve patient care by promoting the adoption of industry standards among healthcare IT vendors and users. With more than 160 systems and over 500 participants, vendors take part in real-life clinical scenarios based on IHE Integration Profiles. The long-term program is sponsored by professional healthcare societies such as RSNA, HIMSS, ACC, ECR and others to support the coordinated use of healthcare IT standards and to provide a common framework for multi-vendor systems integration.

"The results of this testing confirm that NSi can successfully meet interoperability standards with the most relevant healthcare IT solutions," said Mike Morper, vice president of marketing at NSi. "NSi is committed to helping organizations smoothly transition to EHR systems and demonstrate meaningful use with secure print, scan and fax solutions. Customers can rely on NSi to fully support their HIPAA compliance initiatives throughout the entire patient lifecycle."

NSi's software solutions allow healthcare organizations to securely capture, process and route all health, patient and financial information and is currently at work in various healthcare facilities -- hospitals, clinics and physician's offices -- throughout the U.S. and Europe.

Healthcare customers use NSi's award-winning data capture and output management solutions to streamline pharmaceutical processes, create more secure and efficient workflows with bi-directional look up features, provide audit trails for patient records and financial information, and enforce business processes and standards. Physician offices as well as large healthcare providers are able to leverage existing hardware to safely manage patient health information, providing easy and secure access to data even from remote locations.

Visit NSi at HIMSS in New Orleans March 4-6, 2013 in Booth #4182.

About Notable Solutions, Inc.

Notable Solutions, Inc. Successfully Demonstrates Healthcare System Interoperability

Published on Medical Design Technology (<http://www.mdtmag.com>)

Notable Solutions, Inc. (NSi) is a leading provider of intelligent paper, electronic document capture and enterprise output management solutions. NSi's flagship product, NSi AutoStore®, securely captures business-critical information from virtually any source and then intelligently routes the information and corresponding documents into the appropriate business system or output device. NSi's output management solution also supports mobile printing and centralized print cost management capabilities. Ranked among the fastest growing companies in North America on Deloitte's 2012 Technology Fast 500, NSi serves more than thirteen thousand global customers with offices in Rockville, Maryland; Gainesville, Florida; Wetzlar, Germany; Stockholm, Sweden and Sao Paulo, Brazil.
