

Pouch Machine

Based on the field-proven Pouch King platform, this stand-up model more than doubles the output of current technology, say company engineers. The stand-up Pouch King offers speeds up to 500 pouches per min or 3,000 linear inches per minute of packaging material. The continuous motion machine can accommodate a variety of packaging materials from Oriented Poly Propylene (OPP) to retortable materials and produces pouches up to 8 in. wide x 10 in. high x 4 in. bottom, enabling packaging of a vast assortment of products.
