

Bellows

Published on Medical Design Technology (<http://www.mdtmag.com>)

Bellows

This completely sealed protective bellows design is air tight, dust tight, and light tight. It provides assured protection for precision medical equipment, clean room applications, and inspection and test equipment. Among their uses are protecting slides, ways, linear actuators, cylinder rods, ballscrews, and other actuating members that move through a range of travel. They can also be used to protect scales and vision system components.
