

Linear Position Sensors

The CSPR , all-metal linear position sensor is IP67 rated for use in rugged commercial and equipment applications where repeatability and accuracy are required in a cost-effective package. This version is manufactured with a metal sensor tube for robustness and is shielded to prevent signal interruption. The all-metal model provides custom length electrical "pigtailed" instead of connectors so the sensor may be wired directly to the controller. The sensor is manufactured with standard or customizable metal tab plates for easy low-profile installation in machinery.
