

www.masterbond.com

Master Bond, Inc. has a comprehensive, easy to navigate web site devoted to our line of high performance adhesives, sealants, coatings, and encapsulants. Our compounds are successfully employed in the manufacturing of both disposable and reusable medical devices. They are based on specially prepared epoxy, polyurethane, acrylic, silicone, polyamide resins, and include such specialties as cyanoacrylates, anaerobics, hot melts, and latex formulations. They consist of both one and two component systems and cure upon exposure to room temperature, elevated temperatures, or UV light exposure.

The uniquely designed products offer designers and manufacturers of medical products the level of reliability and performance essential for the many different operating conditions encountered in use. These include autoclaving as well as various other types of sterilization, exposure to a large variety of fluids, and resistance to vibrations and impact. The most widely employed formulations have received USP Class VI certification.

The Master Bond web site includes a detailed technical reference section. Answers to frequently asked technical questions are provided in this section. The web site also provides the latest information on new product developments, packaging solutions, and detailed surface preparation procedures for difficult to bond to surfaces. A simple to use contact form is available for a prompt technical response to any questions you may have.
