Molded Rubber & Plastic Corporation: Vision, Innovation & Technology

We are a contract manufacturer of custom molded and finished rubber, plastic, and extruded silicone products. Our customers are OEM companies operating in the medical equipment/medical device, electrical/electronic, and process control/equipment markets. We serve as an extension of your Company; manufacturing and processing components to the highest quality levels. We focus on concept to production involving design, prototyping, tooling, sampling/layout, and production of components designed for close tolerance function. The materials laboratory develops and tests specific formulas for the application. Our secondary operations include laser machining, bonding, slitting, grinding, and ultrasonic finishing.

Extrusion capabilities include, I.D./O.D. tubing, multilumen, shapes, profiles and assemblies. Specialty products include catheters, pump and process tubing, insulators.

All operations are performed within **newly** completed & expanded Class 100,000 certified cleanrooms.

Contact us with your specifications and performance requirements when the opportunity arises.
