

2-Stage Ejectors

Unique design solution for mold builders, 2-Stage Ejectors combine cut-to-length adaptability to varying mold base sizes and plate thicknesses with internal installation to avoid interferences with water line connectors and externally mounted components. Hardened steel for long life, the 2-Stage Ejector line offers two styles of ejection, Bottom Last (BL) and Top Last (TL), and three sizes—20 mm, 26 mm, and 32 mm diameter—to accommodate most metric or inch standards D-M-E mold bases. The stroke range for each ejection stage is achieved by cutting the center rod to desired length (BL and TL) types and by cutting a threaded sleeve to length (BL type only)
