

Linear Actuator

The Size 11 non-captive linear actuator incorporates the same high performance and durable proven design as previously released larger sizes. The various linear actuator options deliver exceptional capabilities, opening avenues for equipment designers who require performance and endurance in a compact package. In fact, according to HSI, the size 11 is the smallest commercially available hybrid linear actuator on the market today. Built for long life (several million cycles) and superior performance, the actuator features engineering thermoplastics in the rotor drive nut and a stainless steel Acme lead screw.
