

Wire Stripper/Twister

The C300 incorporates three independently adjustable stripping heads to strip coaxial cables and stranded solid wires. Using two rotating carbide stripping blades, the C300 strips insulation from wires between 0.028 in. and 0.265 in. Adjustable strip length stop for each head helps achieve consistent strip lengths and can be adjusted while the unit is running. The C300 cuts through the insulation on the wire or cable leaving inner conductors undamaged. The slug is removed, and the strands of the wire are neatly twisted and read for termination.
