

## Data Logger

The HOBO OEM is an inexpensive, four-channel data logger for measuring and recording temperature, humidity, and other parameters. Designed for fast, easy integration into a broad range of OEM products—including portable medical devices—the HOBO OEM offers original equipment manufacturers a number of important advantages. These include battery-powered operation, 4 analog input channels, and programmable sensor warm-up. To enable seamless integration between HOBO OEM loggers and OEM host software programs, the company offers turnkey communications software.
