

Molded Silicone Fittings

Supplied as an assembly and attached directly to silicone tubing or hose, Molded Silicone Fittings are well-suited for applications involving aseptic transfer, sterile processing, and other critical applications in the pharmaceutical, biomedical, and high purity industries. The fittings provide a number of advantages over typical tube-to-fitting connections: eliminates entrapment issues and leaks associated with barb-type fittings; better meets requirements for process validations and inspections; provides a smooth inner surface with a seamless transition; and offers consistent interior dimensions for maximum flow rates.
