

Conveyor

The 2200 Series conveyors with a 1/2-inch diameter nose transfer option are an ideal solution for customers who want the ability to transfer small parts quickly and smoothly. The nose transfer option on these conveyors eliminates the gap or valley formed by conveyors with larger diameter bearings, enabling customers to transfer small parts from the conveyor without getting caught in the gaps or valley. These conveyors have many factors, such as a high speed belt, that distinguish them from the competition. **Dorner Mfg. Corp.**
