

Brush DC Motors

Pittman® Series 14000#153 brush-commutated DC motors and gearmotors feature 11-slot skewed armatures designed to enhance performance by minimizing magnetic cogging (or reluctance torque). This series of motor products offers quiet and smooth operation for a wide range of power applications. The motors are available in seven lengths and can achieve peak torques up to 410 oz.-in. and speeds up to 4,230 RPM.
