

Rotary Stage

The ASR1100 series is an extension of the ASR1000 direct-drive rotary stage used in many laser machining applications, including the manufacture of the most technologically-advanced cylindrical devices in use today. The ASR1100 adds an integral pneumatically operated collet chuck providing "out of the box" material handling capability. The collet chuck on the ASR1100 accepts ER16 series collets, which are readily available in multiple sizes supporting tube diameters from 0.5 mm to 10 mm.
